

Play this page out at 100%. Make sure it is played out at 100% and that your printer is not set to enlarge or shrink the copy. The critical area is the space between the neck and bridge pickups. I have adjusted this space a bit to accomodate a variety of guitars and spacings. This pickguard was designed to fit a Historic Les Paul perfectly and to fit many other Les Paul type Guitars such as Epiphones and Les Paul copies. I recommend cutting the outline out with a pair of scissors and placing on your guitar. Or you can take your existing pickguard off and place this on your exisiting pickguard. Altering a plastic Pickguard is easy but this is aluminum and trimming to fit will be difficult. Make sure you check the Scale below and that they are exactly 2.5 inches or 6 centimeters.
