

Play this page out at 100%. If your printer does not have a paper size large enough to accept the full image simply play this out centered on the largest paper size available. Just make sure it is played out at 100% and not set to enlarge or shrink the copy. The critical areas are the neck and bridge. I have pulled these back a bit to accomodate a variety of guitars. This pickguard was designed to fit a Licensed Strat body but even the Fender Pickguards and bodies vary from year to year so the holes may not line up exactly. Make sure the neck and bridge fit. Altering a plastic Pickguard is easy but this is brass and trimming to fit will be difficult. Make sure you check the Scale below and that they are exactly 2.5 inches or 6 centimeters. Take your existing pickguard off and place this on the guitar or you can take your existing pickguard and place this over it.

**CHECK SCALE**

2.5 Inches
